ANIMESH DURGA MADHAB MOHAPATRA

SOFTWARE DEVELOPER | COMPUTER ENGINEERING STUDENT

Mumbai, Maharashtra · 8424916316 · animeshmohapatramail@gmail.com
github.com/Animesh4956 · linkedin.com/in/animesh-mohapatra-tcet2431/

PROFESSIONAL SUMMARY

Second-year Computer Engineering student and hands-on software developer with experience designing and building end-to-end applications. Comfortable working across frontend, backend, databases, APIs and system integrations. Focused on understanding application architecture, solving practical engineering problems, and using LLM tools such as ChatGPT and Claude to support development, debugging and learning.

EDUCATION

Thakur College of Engineering and Technology (TCET), Mumbai
Bachelor of Engineering in Computer Engineering | 2025–Present **| First-Year Aggregate CGPA: 8.25**

TECHNICAL SKILLS

Programming & Frameworks: Java, JavaScript, TypeScript, Spring Boot, Flutter, React, Next.js, Thymeleaf

Backend & Integration: REST APIs, Spring Security, JWT, API integration

Databases & Developer Tools: MySQL, PostgreSQL, Redis, Git, GitHub, Maven, Docker, GitHub Actions

Cloud & Infrastructure: AWS EC2 (academic practical experience); SSH and RDP remote access

LLMs & AI-Assisted Development: ChatGPT, Claude, effective prompting, code generation, debugging and code evaluation; familiar with tokenization, API integration and rate limiting

SELECTED PROJECTS

Proactive Guard | *Personal Safety & Real-Time Risk Monitoring*

github.com/ProactiveGuard/proactive-guard

- Designed and developed the Flutter Android application and monitoring dashboard from scratch as part of a nine-member collaborative project; continued contributing after the original team disbanded.
- Contributed to the AI risk engine and backend REST APIs, and coordinated integration between the mobile application, backend and dashboard.
- Worked on multi-signal risk assessment using GPS, motion, audio and gyroscope inputs, with weighted scoring and decision rules; integrated Gemini-powered contextual incident summaries.
- Implemented a stop-sharing workflow in which the mobile app notifies the backend, updates journey status and causes the active journey card to disappear from the dashboard.

  Technologies: Flutter, FastAPI, Next.js, Supabase, REST APIs, WebSockets, Gemini API

BusGo | *Full-Stack Bus Ticket Booking System*

github.com/Animesh4956/Bus-Ticket-Booking-System

- Independently designed and developed the application end-to-end, building a Next.js/React frontend and Java Spring Boot backend.
- Implemented Redis-based temporary seat reservations with a three-minute TTL to reduce concurrent booking conflicts, with PostgreSQL used for confirmed booking records.
- Developed JWT-based authentication and PDF ticket generation containing passenger and journey details, seat information and a barcode encoding the booking ID.

  Technologies: Java, Spring Boot, Next.js, React, TypeScript, PostgreSQL, Redis, Spring Security

TCET ERP Portal | *College ERP Interface Demonstration*

github.com/Animesh4956/ERP-PORTAL-Project

- Independently designed and built a desktop-focused ERP interface demonstration using Spring Boot and Thymeleaf.
- Created student dashboard, attendance, results, timetable, syllabus, fees and notification modules, along with sample login accounts.
- Added UPI QR display and CSV marksheet export; the project uses hardcoded demonstration data and does not currently have database integration.

  Technologies: Java, Spring Boot, Thymeleaf
